LastPass

LastPass for emerging and mid-sized enterprises

Prevent unauthorized access, stop disparate password practices, and ensure compliance with a secure and frictionless password and identity management solution built for organizations of your size and technical requirements.

Passwords are still a problem

Passwords are a real headache for businesses, especially for those undergoing rapid growth or operating at maximum scale. And with distributed workforces and an explosion of SaaS applications now the norm, people are managing more credentials, logins, and access permissions than ever before. A sharp increase in credential sharing and access management has amplified the problem beyond weak and reused passwords, making it increasingly difficult to manage who gets access to what.

On top of this mess, there are new rules, regulations, and cyber insurance mandates popping up constantly, making it harder than ever for employees and IT to keep up. Password management is no longer just about storing passwords – today it is about continuously evaluating risk, ensuring access-based policies are in place, and gaining visibility into behavior that could put the organization at elevated risk.

Despite known, prevalent issues:

33% Only 33% of individuals create strong passwords for work

35% 35% of employees report sharing passwords with coworkers regularly

71% There has been a 71% increase in cyberattacks using stolen or compromised credentials

The Solution: Easily login to work with LastPass

LastPass is a cloud-based password manager that works on any device and allows you to generate, share, and manage passwords with a single click or tap, putting an end to password headaches. Plus, you can utilize LastPass to fill access management gaps with native integrations for Microsoft Entra ID, Okta, and other IdPs and IAMs. With over 100 customizable policies, flexible privileges, and detailed reporting, organizations with many logins, increasing security risks, and the need for efficient, scalable solutions can easily standardize password management company wide.

> " Being able to extend password management to our entire organization with LastPass is key to protecting our data and ensures we're securing every endpoint."
>
> Tim Waddell, IT Operations Manager at Hornsby Shire Council

LastPass is the #1 rated password manager on G2 Crowd

Key password manager capabilities

LastPass helps business leaders cut down on password headaches, simplify access management, and reduce the risk of cyber threats.

- **Effortless credential management:** Simplify creating, storing, and sharing passwords, notes, and folders for everyone, on any device.

- **Seamless collaboration:** Quickly enable or disable account access and password sharing with full-time, part-time, and contract workers—no matter where they are.

- **Reliable security:** Ensure your organization's sensitive information stays safe by using LastPass to protect your passwords from potential threats.

Top business benefits

LastPass is known worldwide for its accessibility across any device, ease of use, and seamless experience, whether you're an admin or an end user.

- **Login anytime, anywhere:** No more scrambling for passwords. Access accounts securely from any device, wherever you are, whenever you need.

- **Eliminate password frustration:** Tired of getting locked out? Keep all your logins in one place and autofill with one click, making it easier and faster to sign in.

- **Gain peace of mind:** Stop worrying about password security. Your company's sensitive information remains safe, private, and accessible only to you whenever you need it most.
